LANGUAGES

Spanish — Native
English — Professional

CERTIFICATIONS

- Advanced AWS Course (Universidad Pontificia de Salamanca)
- AZ-900 Azure Fundamentals
- D3.js — Data Visualization
- Django with Python
- College Debate Captain (LEDU)

CORE SKILLS

- Kubernetes (K8s) / OpenShift
- Docker / Container Platforms
- Terraform / Ansible (IaC)
- ArgoCD / GitHub Actions (CI/CD)
- Operator SDK (Golang)
- Grafana / Prometheus / Loki
- Linux / Bash / Python / Java / C
- AWS (EC2, S3, Lambda, EKS)
- Networking & Troubleshooting

Enrique Andrés Villar

Systems Engineer / DevOps Engineer

Platform/DevOps Engineer with 2+ years building scalable, high-availability cloud and on-premise infrastructure using Kubernetes, OpenShift, and Docker. Experienced in Linux systems, automation (Terraform, Ansible), and CI/CD pipelines (ArgoCD, GitHub Actions). Hands-on with observability stacks (Grafana, Prometheus, Loki) and custom Kubernetes operator development in Golang. Background includes scripting (Python, Bash), ETL pipelines, and data engineering — complemented by strong communication skills and a passion for improving developer experience.

WORK EXPERIENCE

Platform Engineer / DevOps

Oct 2023 – Present

INDITEX — Arteixo, ES

- Operate and improve high-availability container-based platforms using Kubernetes (K8s), OpenShift (OCP), and Docker across cloud and on-premise environments — directly aligned with AWS ESC operational model.
- Manage CI/CD lifecycle with ArgoCD and GitHub Actions; automate infrastructure with Ansible and Terraform (IaC); participated in on-call rotations resolving production incidents.
- Built and released an open-source Kubernetes Operator (Operator SDK/Golang) to enforce resource governance across workloads — published under InditexTech on GitHub.
- Maintain observability stacks (Grafana, Prometheus, Loki, Vector, Netdata) ensuring real-time metrics, alerting, and log aggregation across all services.

Data Scientist & Data Engineer (Scholar)

Jun 2022 – Jun 2023

Profuturo (Telefónica Foundation) — Remote

- Designed and implemented ETL pipelines using Python and R; built predictive models and visualised results via TIBCO Spotfire dashboards.
- Developed scripting solutions and automated data workflows, strengthening Python and Bash proficiency.

OPEN SOURCE CONTRIBUTIONS

ArgoCD Operator Contributor

Contributed a feature enabling injection of custom labels/annotations into pods deployed by the ArgoCD Operator. (github.com/argoproj-labs/argocd-operator/pull/1532)

k8s-overcommit-operator (InditexTech)

Developed and released a K8s operator to automatically apply resource overcommit policies based on quality tiers, improving cluster efficiency. (github.com/InditexTech/k8s-overcommit-operator)

Technical Writing — Medium

Published "Install ArgoCD in K3s with certManager and Traefik" — a step-by-step guide covering TLS, HTTP/gRPC routing, and CI/CD setup.

HACKATHONS & AWARDS

3rd Place — Hack4Good (Telefónica / USAL)

Oct 2022

Social innovation hackathon promoted by Telefónica across Spain. Built "AquaWise", a water management solution, reaching the top 3.

3rd Place Senior Edition — Hack4Edu (UPSA, International)

Nov 2021

International multidisciplinary competition on digital education challenges. Won 3rd prize with "Application for prioritizing aid in ProFuturo project"; also participated in a joint project with Universidad de Deusto.

Talent Award — Innovative Social Project (UPSA)

Jun 2023

Recognized under the Talent Plan (TCUE) for "Reality Warping", a student project tutored by university faculty and selected for its social innovation impact.

EDUCATION

Big Data Expert (Postgraduate)

Jun 2023

Universidad Pontificia de Salamanca

- Final project grade 10/10: "Deployment of applications in Kubernetes under a GitOps philosophy". Distinction (highest honors) in Information Systems.

Computer Science & Engineering (Degree)

Jun 2023

Universidad Pontificia de Salamanca

- Awarded a postgraduate scholarship after winning a university hackathon.
